**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3 and 4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 3 and 4 provide for the use of the claimed compound, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

***Claim Rejections - 35 USC § 101***

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 3 and 4 are rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cahn et al. (US 3,309,276).

*Cahn et al. (Col 3 Table I and Example III)* discloses the synthesis and subsequent use of a fragrance component in mixtures with other fragrance components. One of the fragrances synthesized by *Cahn et al. (ibid)* has the structure of an isomer for one of the Applicant's chemicals employed in Claims 1-8. The chemical described by *Cahn et al. (Col 3. Table I, Compound 2)* has a methyl group at the 6 position instead of the 5 position on the pyran ring (with the option for the R<sub>1</sub> group being a hydrogen) while showing an isobutyl hydrocarbon functional group for the R<sub>2</sub> position. *Cahn et al.'s (ibid)* chemical (4,6-dimethyl-2-isobutyl-3,6-dihydro-2H-pyran) can be immediately envisioned by one, with ordinary skill in the art, as being an isomer for the chemical in Claims 1-4 in regard to the Applicant's 4,5-dimethyl-2-(1-methylpropyl)-3,6-dihydro-2H-pyran when the Applicant's R<sub>1</sub> and R<sub>2</sub> designations are respectively a methyl and a hydrogen. *Cahn et al. (Col 3 Table I and Example III)* then demonstrates the use of this and other similar chemicals for use as fragrances and in co-use with other fragrances in a manner that is very closely related to that described by the Applicant's Claims 5-8.

MPEP 2144.09, states: "Compounds which are position isomers (compounds having the same radicals in physically different positions on the same nucleus) or homologs (compounds differing regularly by the successive addition of the same chemical group, e.g., by  $-\text{CH}_2-$  groups) are generally of sufficiently close structural similarity that there is a presumed expectation that such compounds possess similar properties." Thus, Cahn et al. renders the instant claims obvious because the instant claims are isomers of the claimed compounds.
